Introducing DAILY SHIFT HEADS
Ready to Use, Designed for Efficiency & Safety

Streamline your microbial air sampling process with our innovative DAILY SHIFT HEADS! These single-use heads eliminate cross-contamination risks and the need for multiple uses during a shift. Their lightweight design improves handling, making your air sampler lighter and easier to manage than with stainless steel heads. Triple packaging ensures sterility, and each box includes a 5-year valid irradiation certificate.

DAILY SHIFT HEADS also reduce fixed costs by eliminating the need for sterilization documentation for each cycle. The semi-transparent material allows for easy culture plate verification, preventing errors. Plus, they're environmentally friendly – the material is recyclable!
